

Spartanburg Community College is requesting quotes for an ID card printing solution that can integrate with our Ellucian Colleague ERP system. At the college, we use HID iClass cards with proximity technology. The printing solution should be able to encode the HID number printed on the card and automatically transfer this number to Lenel S2, our door access control system. The preferred application should be easy to handle on the design side and match with our marketing designs (Attached). Profile images must also be stored in a database for easy access and retrieval for our internal system. Our payment system is Touchnet, and we expect these HID iClass proximity cards to work with the payment system and Lenel S2 our door access control system.

Additionally Considered in this quote should be:

- From Touchnet, the OneCard Web Service API fee to make the card work with Touchnet, and the Remote Support (3rd Party Partner) Fee.

All quotes are due no later than 2:00 pm March 26, 2024

Quotes are to be emailed to steedt@sccsc.edu
